

Performance

To create Venza, Toyota engineers knew they would need to elevate performance across a wide range of criteria. The 182-hp 4-cylinder and 268-hp V6 engines are mated to a 6-speed Super Electronically Controlled Transmission that helps manage the engine's power, so Venza can offer smooth, seamless shifts and excellent fuel efficiency.

V6 and 4-cylinder engines shown with dual VVT-i.

Venza V6 AWD shown in Golden Umber Mica.

The 4-cylinder and V6 models also come available with Toyota's Active Torque Control AWD System. It actively controls each wheel to help optimize the available traction by distributing the engine's torque to just the right wheels at just the right moment.

Toyota Quality

Quality is built right into the production process from the selection of raw materials, right down to the vehicle's final inspection. And it is the responsibility of everyone to ensure the highest quality possible on each and every vehicle. It's through Toyota's philosophy of 'Kaizen' that we are always looking for ways to continually improve. That's how we make things better.

THE TOYOTA PRODUCTION PROCESS is one that is constantly evolving. With our "Just-In-Time" practice, the goal is to make certain that during the manufacturing process, only what is needed gets produced. The result is twofold: because there's no excess supply, any issues are exposed and promptly resolved to ensure that everything off of the Toyota assembly line is of exceptional quality.

THE HUMAN TOUCH. As impressive as the machinery is, the achievement of perfect fit and finish is also the result of continuous human touch for every step of the way.

TOYOTA CANADA COLD RESEARCH CENTRE. Located in Timmins, Ontario, our teams test Toyota vehicles in actual Canadian winter conditions at our cold weather testing track to ensure that they remain dependable throughout the long winter months.
