

Safety and Performance

The rugged FJ Cruiser is loaded with advanced safety features to help keep you in control, whether you're cruising the smooth city roads, or tackling the Canadian wilderness. With the safety of six standard airbags, coupled with the ample performing power of FJ's V6 engine, packing 270 lb ft⁵ of torque, you'll have the peace of mind to focus on the adventurous roads ahead.

FJ Cruiser shown in Army Green.

STAR SAFETY SYSTEM™

2011 FJ Cruiser comes standard with the Star Safety System™. This integration of active safety features is designed to protect occupants by helping drivers avoid accidents in the first place. The Star Safety System™ includes Vehicle Stability Control (VSC),⁶ Traction Control (TRAC), Anti-lock Brake System (ABS), Electronic Brake-force Distribution (EBD), Brake Assist (BA),⁷ and Smart Stop Technology (SST).⁸

Toyota is the first full-line manufacturer to make all of the elements of the Star Safety System™ standard on every new 2011 vehicle. Visit toyota.ca for more details.

VSC VEHICLE STABILITY CONTROL⁶

TRAC TRACTION CONTROL

ABS ANTI-LOCK BRAKE SYSTEM

EBD ELECTRONIC BRAKE-FORCE DISTRIBUTION

BA BRAKE ASSIST⁷

SST SMART STOP TECHNOLOGY⁸

Toyota Quality

Quality is built right into the production process from the selection of raw materials, right down to the vehicle's final inspection. And it is the responsibility of everyone to ensure the highest quality possible on each and every vehicle. It's through Toyota's philosophy of 'Kaizen' that we are always looking for ways to continually improve. That's how we make things better.

THE TOYOTA PRODUCTION PROCESS is one that is constantly evolving. With our "Just-In-Time" practice, the goal is to make certain that during the manufacturing process, only what is needed gets produced. The result is twofold: because there's no excess supply, any issues are exposed and promptly resolved to ensure that everything off of the Toyota assembly line is of exceptional quality.

THE HUMAN TOUCH. As impressive as the machinery is, the achievement of perfect fit and finish is also the result of continuous human touch for every step of the way.

TOYOTA CANADA COLD RESEARCH CENTRE. Located in Timmins, Ontario, our teams test Toyota vehicles in actual Canadian winter conditions at our cold weather testing track to ensure that they remain dependable throughout the long winter months.

Departure Angle (degrees)	31.0

- All Toyota vehicles shown in this brochure, have Supplemental Restraint Systems (SRS) which, depending on the model, may include driver and front passenger airbags, front seat-mounted side airbags or side curtain airbags. For important safety information about the Supplemental Restraint System in a vehicle, please see the Owner's Manual or contact your local Toyota Dealer.
- These estimates are based on the Government of Canada's approved criteria and testing methods. The actual fuel consumption of this vehicle may vary. Refer to the Government of Canada publication *EnerGuide Fuel Consumption Guide*.
- Toyota tests certain phones for compatibility with Bluetooth technology. Some vehicles equipped with Bluetooth technology are available with bilingual capability. Note that the recommendation of Toyota is not a warranty of the performance for any phone and that some problems may occur with any type of handset based on the service coverage available in your area. Please see your Toyota Dealer for details.
- Payload = Passengers, Equipment, Luggage and Cargo.
- Ratings achieved using Premium fuel.
- Vehicle Stability Control (VSC) is an electronic system designed to help the driver maintain vehicle control under adverse conditions. It is not a substitute for safe driving practices. Factors including speed, road conditions and driver steering input can all affect whether VSC will be effective in preventing a loss of control.
- Brake Assist (BA) is designed to help the driver take full advantage of the benefits of Anti-Lock Brake System (ABS). It is not a substitute for safe driving practices. Braking effectiveness also depends on proper brake-system maintenance and tire and road conditions.
- Smart Stop Technology (SST) operates only in the event of certain simultaneous brake and gas pedal applications. When engaged, the system will reduce engine power to help the brakes bring the vehicle to a stop. Factors including speed, road conditions and driver input can all impact stopping distance. Smart Stop Technology is not a substitute for safe and attentive driving and does not guarantee instant stopping.
